-->When we execute Python Program (Compilation + running(Interpretation))--->Result

Byte Code (Intermediate Code)

FirstProg1.py

Source Code (Python Programmer)

**(Interpretation)
Compilation Phase**

Python Compiler-converts Line by Line source code into intermediate code

FirstProg1.pyc

Execution Phase

**PVM
(Interpretation)**

PVM reads Line by Line of Byte Code and converted into Machine Code

Gives Result

Def. of PVM(Python Virtual Machine):
PV M reads line by line of byte code and conveerted into Machine Code , which is understandable by OS and Processor and gives Result.
